PROFILE

Senior Fullstack Engineer with 5+ years building and scaling production SaaS, now shipping GenAI products end-to-end — autonomous agents, RAG pipelines, and LLM-integrated platforms. I've taken AI agents from concept to deployed product across finance, security, and education, including hackathon builds for Google Cloud and Splunk and a live job-application SaaS in production. Strong foundation in event-driven architecture, multi-tenant systems, and cloud infrastructure on AWS and GCP. I build things that ship.

CORE SKILLS

AI / GenAI: LLM integration (Gemini, OpenAI, Qwen), RAG pipelines, autonomous AI agents, agentic loops, vector databases, prompt engineering

Backend: Node.js (Express, NestJS), Python (FastAPI), PHP (Laravel), Golang

Data: PostgreSQL, MySQL, MongoDB, Redis, TimescaleDB — query optimization & caching

APIs & Events: REST, WebSockets, Webhooks, Server-Sent Events (SSE), RabbitMQ, Redis Streams

Cloud & Infra: AWS (SQS, SNS, SES, EC2, RDS), GCP, Docker, Railway, Vercel, GitHub Actions, GitLab CI

Observability: Logs, metrics, tracing, incident response, production support

SELECTED AI & ENGINEERING PROJECTS

Sentinel — Autonomous AI Threat-Hunting Agent — [Splunk Agentic Ops Hackathon](#)

- Built an autonomous security agent that hunts threats across Splunk Enterprise data, reasoning over logs and surfacing incidents without human prompting.
- Python agentic loop with a FastAPI backend streaming live findings to a React SOC dashboard over Server-Sent Events (SSE).

BillGuard — AI Finance Agent — [Google Cloud Rapid Agent Hackathon](#)

- AI agent that ingests bank-statement CSVs and gives Nigerian professionals plain-language insight into their spending.
- Built on Gemini 2.0 Flash, FastAPI, and MongoDB Atlas; deployed full-stack (backend on Railway, frontend on Vercel).

Jobbly — AI Job-Application SaaS

- Co-founded and built a live SaaS that scrapes job listings and auto-generates tailored CVs and cover letters using LLMs.
- Node.js backend deployed on Railway, serving real users.

MasteryPath — AI Learning Platform — [Backend & AI Lead · XPRIZE/Google entry](#)

- Lead backend and AI for an adaptive learning platform spanning 6 developer tracks, integrating LLMs for personalised content and a RAG layer over a curated knowledge base.
- Node.js microservices (monorepo), Next.js, Supabase, Upstash Redis, Railway; Gemini integration.

TruthCart — AI Price-Gouging Detection — [Bright Data Hackathon](#)

- Agent that detects price gouging across global e-commerce markets using Bright Data's web-scale data infrastructure.

SplitBlink — On-Chain Bill Splitting (Solana) — [Solana Actions / Blinks](#)

- Shareable on-chain bill-splitting flows built with Solana Actions/Blinks, Next.js, Supabase, and @solana/web3.js.

PROFESSIONAL EXPERIENCE

Backend Engineer · Voyatek Group *Aug 2024 – Present*

- Architected multi-tenant SaaS backend services handling peak-traffic workloads, owning services end-to-end from RFC design through production observability.
- Built a Unified Mailbox system centralising inbound/outbound communications across multiple channels.
- Implemented transactional and marketing email pipelines via AWS SES, ensuring high deliverability at scale.
- Led message-driven service decomposition using Redis Streams, improving system resilience and scalability.
- Optimised database queries and caching strategies, **reducing average API response times by 28%**; improved deployment lead time through CI/CD automation (GitHub Actions).

Fullstack Developer · Tezza Solutions *Sep 2023 – Apr 2024*

- Built and maintained RESTful APIs powering customer-facing features; collaborated closely with frontend teams for full-stack delivery.
- Designed data ingestion and transformation pipelines handling high-volume datasets; automated deployment workflows for faster, more reliable releases.

Backend Engineer · Decode Analytical *May 2022 – Sep 2023*

- Built production SaaS backend systems with PHP/Laravel and PostgreSQL, including APIs and data models for user-facing features and admin tooling.
- Implemented Redis caching to sustain high-traffic endpoints; improved deployment reliability through CI/CD and proactive monitoring.

Backend Engineer · AEY Group, Nairobi *Sep 2020 – Mar 2022*

- Built backend services for data-intensive applications; designed automated test suites **improving reliability by 40%**.
- Implemented data processing pipelines that **cut processing time from 5 minutes to under 1 minute**.

EDUCATION

B.Eng. Wood Products Engineering · University of Ibadan *2014 – 2019*
